The present invention relates to new NOVX polypeptides. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, or fight by thuman. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), immune disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, cefects, acne, hair growth, pigmentation disorders, endocrine disorders, cepiratory disease, gastro-intestinal diseases, reproductive, health, respiratory disease, bone marrow transplantation, endocrine diseases, allersy and inflammation, nephrological disorders, urinary system disorders, neuropsychiatric disorders and age-related disorders. The

The invention relates to an isolated polypeptide comprising CGDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CGDD, a biologically active or acid sequence at least 90% identical to CGDD, a biologically active of fragment or an immunogenic fragment. Also included are the polymucleotides encoding CGDD1-12, a recombinant polymucleotide comprising a promoter sequence operably linked to the CGDD polymucleotides, a cell transformed with the recombinant polymucleotide, an antical transgenic organism comprising the recombinant polymucleotide, an antical antibody, screening for compounds which bind to/modulate or are captured and antagonists and encoding to compounds which bind to/modulate or are comprised and antagonists are useful for diagnosing, treating or compounds which bind to/modulate or are composited and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of CGDD, polymucleotides, paroxysmal nocturnal haemoglobinuria, polycythaemia of asorders (e.g. renal tubular acidosis, anaemia or mental retardation), curthosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia cidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer disease, parkinson's disease or the mensitual Oyle), or autoinmune/inflammatory disorders (e.g. Alzheimer disease, parkinson's disease or the mensitual Oyle), or autoinmune/inflammatory disorders (e.g. Alzheimer disease, parkinson's disease or thyroiditis, contact dermatitis, contact dermatitis, contact dermatitis, parasitic, protozoal or helmintic osteorosis, panceatitis, rumanamia, and archinic ancoders of costeorosis, panceatitis, rumanamia and and amino and costeorosis, panceatitis, rumanamia and and amino and archinic second or the expression of mucleic acid and amino accoders of costeorosis and and amino and and anion accoders and and amino accoders and an amino accoders and an amino accoders and an amino accoders and an amino acc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        exogenous compounds on the expression of nucleic acid and amino acid sequences of proteins associated with CGDD. The invention relates to polynuclectides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are vacful in gene therapy, vaccines or peptide therapy. The polypeptides are vacful in gene therapy, vaccines or cell growth factor activity, hemmatopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111
(AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the

                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obesity, asthma, IGA nephropathy, cirrhosis, arthritis, AIDS diabetes, obesity, asthma, (e.g. bacterial, viral, parasitio), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NoV1 is a TEN-M4 like protein and the NOV1 gene is localised to chromosome 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           80

The present invention relates to methods of detecting a prostate cancersasociated transcript in a cell from a patient. The method comprises
contacting a biological sample from the patient with prostate cancerassociated polynucleotides (designated PC genes) that selectively
bybridise to a sequence that is at least 80% identical to them. The
prostate cancer-associated polynucleotide sequences are differentially
expressed in prostate tumour tissue or in prostate cancer and are derived
from the tissues of various organisms such as humans or other mammals
(e.g. mice, sheep and dogs). The methods of the invention are useful for
diagnosing and treating prostate cancer in mammals. The prostate canceras well as for identifying modulators of prostate cancer or agents that
inhibit prostate cancer. The nucleic acid sequences are particularly
useful in gene therapy, as a vaccine or in antisense applications.

Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated genes are expressed in a

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the

oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a conjuncteotide which comprises a 1'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence of in the comprises a 1'-end sequence in the comprises a 1'-end sequence in the comprises a 1'-end sequence in a selected from those defined in the specification. The primer sets can be useful for synthesising polynucleotides, comparationarly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the AMH13628 and AMH13633 to AMH18742 represent human cDNA sequences; AAMH3634 to AAMH3628 and coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |||||||:::

length cDNAs defined in the specification. Where a primer set comprises:

(a) an olgo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 oligonucleotide sequences defined in the specification, where the mucleotide sequences defined in the specification, where the mucleotide comprises at least 15 nucleotides; or (b) a combination of a no oligonucleotide comprising a sequence complementary to the comprises at least 15 nucleotides; or (c) a complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence, where the complementary to a polynucleotide comprises a 3'-end sequence, where the complementary to a coligonucleotide comprises a 1 east 15 nucleotides and the combination of the 5'-end sequence)3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gardicularly full-length cDNAs. The primers are useful for synthesising polynucleotides, detection and/or diagnosis of the abnormality of the proteins encoded by cDNAs easily without any specialised methods. AAH13632 represent consent human amino acid sequences; and AAH13629 to AAH13622 represent consent immentation of the consent immentation of the consent immentation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

The present invention describes primer sets for synthesising 5602 full-
corplementary strand of a polynucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602
complementary strand of a polynucleotide which comprises one of the 5602
complementary strand of a polynucleotide where the
nucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 1'-end sequence complementary to a
polynucleotide comprises a 1 least 15 nucleotides and the combination of
coligonucleotide comprises a 1 least 15 nucleotides and the combination of
coligonucleotide comprises a 1 least 15 nucleotides and the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in the
specification. The primer sets can be used in antisense therapy and in
specification. The primers allow of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the proteins
connas assily without any specialised methods. AAH03166 to AAH13628 and
connas assily without any specialised methods. AAH03166 to AAH13628 and
consern thuman amino acid sequences; and AAH3629 to AAH13628 corpresent
coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                               primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                            Claim 8; SBQ ID NO 11430; 2537pp + Sequence Listing; English.

disorders New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, diso of vesicular transport, gastrointestinal disorders, and autoimmune diseases

Claim 8; Page 119-121; 444pp; English

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cyrostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the numan disease selected from NOVX-associated disorder, such as cancers covary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or Pick's disease), disorders of vesicular transport (e.g. epilepsy, stroke, disease), disorders of vesicular transport (e.g. epilepsy, stroke, disease), disorders of vesicular transport (e.g. epilepsy, stroke, disease), disorders of ulcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX proteins from minute content of an incompose and as vaccines. The NOVX proteins from minute coloquical samples (tissue typing), and in forensic identification of a longical sample. The present sequence encodes human NOVISC, which is

WPI; 2002-732706/79. P-PSDB; ABP53589 New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune diseases.

Claim 8; Page 123-125; 444pp; English.

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticopic, candidovascular, cytostatic, anticallergic, anticalmanator, anticarbrittic, virucide, immunosuppressive, anticallergic, anticanaemic, antibacterial, tungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the human disease selected from NOVX-associated disorder, such as cancers human disease selected from NOVX-associated disorder, such as cancers covary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's ischaemic cerebrovascular tiasese, Alzheimer's disease or pick's disease, or goitte), gastrointestinal disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological sample. The present sequence encodes human NoV15d, which is ocated on chromosome

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nocitropic, cardiovascular, antidiabetic, antidinflammatory, antichematic, antiabacterial, funciode, immunosuppressive, antiallergic, antiahaemic, virucide, protozoacide and antihabaminhic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a contract of a medicament for treating a syndrome associated with a contract of a medicament for treating a syndrome associated with a contract of a leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, discase), disorders of vesicular transport (e.g. cystic fibrosis, discase), disorders of vesicular transport (e.g. cystic fibrosis, discase), discases (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune haemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic conduce antibodies and as vaccines. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX proteins from minute cological samples (tissue typing), and in forensic identification of a located on chromosome mapping, and in forensic identification of a located on chromosome and processes in the present sequence encodes human NOVISb, which is

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticately, cardiovascular, contidabetic, anticallergic, anticalmentic, varioside, immunosuppressive, anticallergic, anticalmentic, varioside, protozoacide and antibelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the therapy. The NOVX proteins, nucleotides or antibodies can be used in the human disease selected from NOVX-associated disorder, such as cancers continged and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's ischaemic cerebrovascular transport (e.g. cystic fibrosis, ciabaetes mellitus, Grave's disease, or goitre), gastrointestinal disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune haemolytic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological sample. The present sequence encodes human NOVISa, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wolenc AR, Vernet CAM, Elsen A, Corman L;

The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell antibodies that him to the proteins encoded by the polynucleotides, antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide. The polynucleotides can be used as probes for the identification and isolation of full length as nutritional supplements. The protein is useful in the treatment of various immune defliciencies and disorders such as viral infections,
                                                                                                                                                                                                                                                                                                                                   Dacterial infections, fungal infections, autoimmune disorders (e.g., theumatoid arthritis, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are disease, parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing also useful for reatment of burns, incisions and ulcers. The proteins are lymphoid cell deficiencies. The present sequence is one of the 625 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequences encoding a secreted protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPD at

The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                          New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Other;

Patent No. 6551795

GENERAL INFORMATION:
APPLICATUS MARC J. Rubenfield et al.
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196-136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PLING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 7224
LENGTH: 4881
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7 GlySerLeuArgLeuLeuAlaAsnGlyMetGluValAlaLeuGlnThrGluProHis

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
